

Space time Energy

Alif Ashraful

(Science, Chandpur Government Technical School and College, Bangladesh)

Abstract:

Background: Spacetime is one of the most important topic in physics. Scientists of many countries are researching on it since many centuries. And the cosmology are highly connected with this Spacetime. Because the birth of Spacetime is the birth of Universe. The Spacetime is just a addition of some dimensions. All of that dimensions were created by the Big Bang. From the creation of human till now we have discovered many answer of Universal problem. And many of the problem is still unsolved. One of that is time travel.

Materials and methods: All of this research has done by some of calculation. That calculations have created by imagination and logic. All of that calculations are based on Spacetime.

Results: Spacetime was created by an energy named Spacetime Energy. Spacetime Energy is the reason of expansion of Universe. We all know that the Universe is expanding. We see it expanding because the Spacetime Energy is creating more space every moment. And this Energy is the only reason of time. Since it created time it is making us run on the 4th dimension known as time. And using the rules of Spacetime Energy we can travel on time.

Conclusion: Spacetime energy is the reason of everything's creation. And it's also the reason of our speed on space and time.

Keywords: Spacetime Energy, dimension, creation, time travel.

Date of Submission: 18-07-2022

Date of Acceptance: 02-08-2022

I. Introduction

On this paper I just want to say about the birth of space and time. The more thing I am going to discuss that why all objects can't be able to be in rest in space and time. And the main topic of this paper is an energy named Spacetime Energy. I am going to say about the energy. And also going to say how this energy was born, and how time works using Spacetime Energy. And I will also say that why we can't control the 4th dimension, known as time.

II. Materials and methods

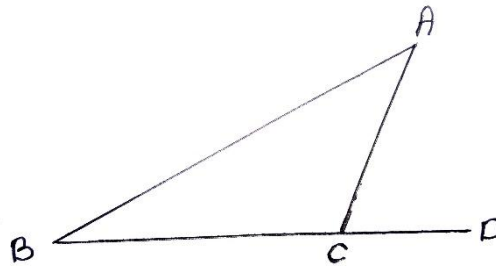

This research and study is completely my personal research. It has done by some of calculations and imagination. Since my childhood I used to think about the creation. And on this study I just tried to find out some of mysteries. So I discovered the Spacetime Energy. This energy is the reason of every type of creations in our Universe.

Study period: This period was from November 2021- July 2022.

III. Result

Birth of Spacetime Energy: The Spacetime Energy was created before the Universe created. The creation of our Universe means the creation of some of dimensions named space and time. We know time is the fourth dimension. Before the creation of Universe when Quantum Fluctuations happened, an energy was created. And that energy is the Spacetime Energy. And this energy started to create Spacetime. And the first attempt of the Spacetime creation is known as Big Bang. The reason behind the Big Bang and the creation of Space and time is this energy. This energy created the dimensions we know as time and space.

Figure on.1

Actions of Spacetime Energy: The first work of this energy is to create space and time. And in every moment it's doing the same job. Because of new space creation, we are thinking the Universe is expanding. Not only 3 dimensions of Universe are expanding. The 4th dimension named time is also expanding. That means because of Spacetime Energy the both time and space are expanding. The second action of Spacetime Energy is to make run all objects in the c ($c =$ speed of light) in the space and time. The addition of our velocity on space and time is equals to c . So when we increase our velocity in space, our velocity on time gets slower. Always this energy balances our velocity in space and time with the value of c . And that's how time goes slower for the fastest objects and time goes faster for the slower objects.

On the figure no. 1 AC is velocity on time which is standing on BC on a obtuse angle. And BC is the space. There's BC is less than BD. And BD is the speed of light. And AB is our velocity on space and time. Because of we run on the speed of light in space and time, so AB is equals to BD. And when the BC increases, the AC decreases and when the BC decreases the AC increases. But the AB is always constant and equals to c .

Control over dimensions:

Our space is the addition of the first 3 dimensions. And we can control these dimensions. Every dimensions are standing on 90° angle on another dimensions. And we can control those dimensions which stands on 90° angle. But the 4th dimension are standing on an obtuse angle on 1st, 2nd and 3rd dimensions. Because of it being an obtuse angle, we can't control it. So the Spacetime Energy are controlling us on this dimensions. Actually our speed on time doesn't increase or decrease. As our speed on space, our angle of traveling in time increases or decreases. When our angle on time decreases our speed on time increases. And when our angle on time increases, our speed on time decreases.

IV. Discussion

When we travel a distance in 4th dimension, we call that time. We calculate that as a second. But the 4th dimension is not like another dimensions. 4th dimension is a circle dimension. That means the 4th dimension is round. And the distance we travel on the radius of the circle is called time. The time is just a illusion made by our brain using the distance we travel on 4th dimension's radius. And the radius also changes it's angle on the first 3 dimensions.

$$c(1-1/3.1415926)= 1 \text{ second}$$

On this equation the c is the speed of light. The value given 3.1415926 is the value of pi. So we can see on the equation that when we travel $c(1-1/3.1415926)$ meter on 4th dimension in a angle of 0° is actually 1 second we calculate. (When we travel on time on another angle than the value can be changed)When we increases our speed on space our angle on time start to decrease. So by increasing our speed if we can make us run on time in a angle of 90° than we can travel in time easily. Then time will come under our control. And the door of the 4th dimension will be opened for us, and we will be able to control it.

V. Conclusion

Spacetime energy is the creator of dimensions. This Energy was since the creation. This Energy is the first energy of Universe and the reason of many unknown problems. This Energy make everything run and the reason of time.
